Premier PHP 2026 Massage Recliner

Wouldn't it be nice to have a relaxing and therapeutic massage, any time, simply by taking a seat in your own home? With the new PHP 2026 Massage Recliner, you can lean back and feel the stresses of your day melt away as Shiatsu, Deep Tissue or Swedish style massages are delivered at the touch of a button. Using today's most advanced technology, this amazing recliner actually mimics the hand motions of a trained therapist, and is even able to sense your body's individual acupressure points. From your feet and calves, to your seat and thighs, to your back, shoulders and neck, the whisper-quiet movements gently but firmly relieve tensions, soothe muscles and improve circulation. It's like the rejuvenating effect of a day spa . . . but you'll never need a reservation.

ACU BODY SENSING (ACU)

Computer scanning technology—exclusive to Premier Health Products—locates your individual acupressure points, then focuses customized, Deep Tissue therapy on the areas where you need it most.

HUMAN TOUCH ALGORITHMS (HTA)

HTA precisely simulate the hand movements of a massage therapist, providing Shiatsu “finger pressure,” Deep Tissue or Swedish massage styles in four motion modes.

ROLLING

Specially designed rollers traverse pressure points in an outward motion, stimulating the blood flow that supplies oxygen to body tissues while removing toxins.

KNEADING

Four bi-directional rollers operate in a kneading fashion to loosen knots and relieve tensions in tired muscles. By moving both clockwise and counter-clockwise, these rollers deliver the most effective massage available in any recliner.

TAPPING

Tapping or “Chop Chop” patterns work at varying speeds and patterns with pinpoint accuracy, sending tension-breaking vibrations deep into muscle areas that might have been missed by rolling or kneading.

DUAL ACTION

KNEADING
+
TAPPING

Kneading and tapping patterns are used together in specific sequences to provide an intense massage that works the entire back. Surface tensions and deep knots are released simultaneously.

DUAL MECHANICAL CALF MASSAGE
KNEADING ROLLING

DUAL MECHANICAL FOOT MASSAGE
KNEADING ROLLING

3D CALF AND FOOT MASSAGE

Our exclusive 3D technology rolls, kneads and squeezes legs and feet for a lower body massage that’s unsurpassed in today’s market. Circulation is improved, allowing your entire body to better relax.

CONTOUR AND MECHANICS

S-curve design ergonomically supports your spine and ensures full contact with heating and massage mechanisms. No other recliners provide a fuller stroke or a more complete back massage, even for shorter or taller users.

LCD REMOTE

Full function LCD remote offers easy access to over 20 pre-programmed massage sequences, as well as manual input for focusing on your specific needs. Adjustable speed and intensity controls let you customize your massage precisely, for anything from Deep Tissue therapy to a relaxing rub-down before bedtime.

VIBRATING MOTORS

Multi-speed vibrations can accompany all functions for deeper penetration and enhanced relaxation.

ADVANCED HEATING ELEMENT

Heat improves circulation and loosens tight muscles allowing the therapeutic effects of our multifunction massagers to alleviate your toughest knots and relax your deepest tensions.

SEAT AND THIGH MASSAGE

Gluteus muscles are massaged to relieve soreness and fatigue associated with sitting all day. Variable speed vibrations effectively break up toxins and cellulite, while improving circulation.
